Case studies

Focus
✓ Describe in a concise manner the state of project implementation, based on in-country consultations
✓ The projects presented here are in different stages of implementation.
✓ The case studies commissioned focus on:
   ✓ level of collaboration of implementing agencies and stakeholders
   ✓ Access modalities to funding
   ✓ Levels of awareness amongst stakeholders
   ✓ Engagement of the vulnerable communities in the project areas

Methodologies
✓ Qualitative research techniques considering project documents and processes
✓ Consultations with relevant stakeholders on different levels
✓ Level of public awareness about adaptation, particularly in the project areas
✓ National policies and strategies and institutions involved in the implementation
Senegal case study

Adaptation to coastal erosion in vulnerable areas
## Case study: Senegal

### Adaptation Fund profile

**Project title:** Adaptation to coastal erosion in vulnerable areas

**Project documents:** [https://www.adaptation-fund.org/project/1327-adaptation-coastal-erosion-vulnerable-areas](https://www.adaptation-fund.org/project/1327-adaptation-coastal-erosion-vulnerable-areas)

**AFB approval date:** 17 September, 2010

**Duration:** Jan. 2011-Jan. 2013 (2 years)

**Budget:** US$ 8,619,000, US$ 7,869,000 disbursed by November 2011

**Implementation:** Centre de Suivi Ecologique (CSE) (NIE)

**Execution:** Directorate of Environment, NGO “Green Senegal” and Association “Dynamique Femme”

**State of implementation:** Building up of coastal protection facilities. 4th Semester

**Case study preparation:** ENDA TM, Senegal

### Objectives

- Implement the actions to protect the coastal areas of Rufisque, Saly, and Joal against erosion;

  **Fight the salinization** of agricultural lands;

  Assist local communities of the coastal area of Joal, *especially women*, in handling fish *processing areas* of the districts located along the littoral

  - Communicate on the adaptation, *sensitize and train local people* on climate change adaptation techniques in coastal areas
Achievements

✓ Building of coastal protection infrastructures in Rufisque, 

✓ Rehabilitation of the anti-salt dike in Joal; 

✓ Establishment of the national steering committee; 

✓ Increase of public awareness, communication and information (radioprograms, meetings, website, etc.) 

✓ A network of coastal stakeholders
Response to community concerns

Salinity affected paddy fields thus for over a decade we can no longer practice rice growing. We hope that the rehabilitation of the dike will allow us to revive this activity.”

- Anna Ndiaye, responsible of women association, Joal-Fadiouth-
Key challenges

✓ Importance of expanse to cover in relation to available resources (risk of circumvention of the Joal’s anti-salt dike by seawater);

✓ Establishment of protection infrastructures (Saly) before the end of the project (January 2013);

✓ Delay for the vote of Coastal Act.

“"It is a godsend opportunity that will save us from the threats of encroachment of the sea on the coast and allow us to save our livelihoods ...”

-Project beneficiary-
Recommendations

✓ Integration of the project into the dynamics of local planning. Then adaptation measures in beneficiary localities will not affect non-beneficiary communities.

✓ Encourage ownership of the project by the population for their viability and or sustainability

✓ As catalyst of adaptation measures, the project must motivate government to adopt a large strategy on coastal management.
Honduras case study
Addressing Climate Change Risks on Water Resources in Honduras; Increased Systemic Resilience and Reduced Vulnerability of the urban poor
Case study: Honduras

Adaptation Fund profile

Project title: Addressing Climate Change Risks on Water Resources in Honduras; Increased Systemic Resilience and Reduced Vulnerability of the urban poor

AFB Approval date: 17 September 2010

Duration: 2011 to 2015 (five years)

Budget: US$ 5,698,000, US$ 2,957,066 disbursed as of Nov. 2012

Implementing Entity: United Nations Development Program (UNDP)

Executing Entity: Natural Resources and Environment Secretariat (SERNA).

State of implementation: In September 2012, the project is in its phase of implementation, specifically, in the first semester of the second year.

Case study prepared by: Fundación Vida, Honduras
Project Objective:

- Project Objective: To increase resilience to climate change water-related risks in the most vulnerable population in Tegucigalpa, Honduras through pilot activities and an overarching intervention to mainstream climate change considerations into the water sector (SERNA, 2010).

- The project aims to validate specific adaptation measures that range from economic incentives to investments in low-cost technologies, which will help to orient the work at local and political level on climate change adaptation in Honduras.
From concept to implementation

- The project was conceptualized at the same time that the National Climate Change Strategy

- Drafting process included: a) inputs and concerns that arose during the design of the strategy, b) lessons learned from other projects, c) opinion of local people (surveys)

- SERNA defined an implementation structure looking for: a) transparency, b) participation – most vulnerable - , c) reduction of labor and administrative costs.

Nueva Danli neighborhood, one of the communities being attended by the project
What are the main achievements so far?

- **Inter-institutional coordination/arrangement:** The project has managed to create six inter-institutional teams.

- **Information flow:** The project has allowed a better flow of information among institutions, beneficiaries and NGOs.

- **Beneficiaries’ participation:** Some activities are being done under special schedules to promote equal participation. Participation is not only to inform but for decision-making on project activities.

- **Participation from NGOs:** There has been coordination in some activities with NGOs. A further NGO involvement could be recommended.

- **Incorporation of climate change local planning and adaptation technologies:** They are being piloted for the first time!
Future challenges

• To maintain/increase coordination and participation at governmental and local level
• To target some “challenging” project targets on issues such as relocation/water access improvement
• To replicate and mainstream what is being learned!
• To attract more funding for adaptation!
Benin case Study

Adaptation of the Cotonou Lagoon ecosystems and human systems to the sea level rise and extreme weather phenomena impacts

Project endorsed in the pipeline, to be fully developed

Supporting the most vulnerable to climate change.
Objectives and components of Benin project

- Protection of the lagoon shores, rehabilitation of the infrastructures;
- Fight against the pollution of the lagoon and living environment;
- Fight against the seasonal floods of the shores and riparian areas and sensitization of economic operators;
- Mainstreaming climate changes adaptation strategies in the legal texts regulating fishery and back-up the redeployment of affected fishermen;
- Sensitization and training of the local communities on climate changes, adaptation techniques and best practices.
Challenges

✓ Good participative process to update final project proposal
✓ Dialogue framework with all stakeholders (F, N, FD, LG);
✓ Improvement of living conditions and fishing
Summary findings

Limitations

✓ Findings are not applicable to all countries
✓ Different scope of the studies and time constraints do not allow a full assessment

Key findings

✓ All projects are much appreciated and come on time
✓ Only parts of the overall adaptation needs addressed within each respective country
✓ Clear call for scaling-up of the resources available per country
Summary findings

Recommendations

✓ local stakeholders and vulnerable group must be involved from outset

✓ inter-institutional and multi-stakeholders coordination, the projects are a good opportunity to promote transparency

✓ ownership is higher when project has infrastructure components or tangible deliveries

✓ Direct access is no impediment to having direct link to local communities
Thanks for the attention
www.af-network.org
kaloga@germanwatch.org

This project is part of the International Climate Initiative
The German Federal Ministry for Environment,
Nature Conservation and Nuclear Safety (BMU)
supports this initiative on the basis of a decision by the
German Bundestag.
The AF NGO network

- Platform for a multi-stakeholder participation, hosted by Germanwatch

- Contribute to **successful outcomes** in the interest of the **most vulnerable communities**.
  - Advocate for an inclusive and unbiased consultative process throughout the projects and to track adaptation finance
  - **Support NGOs** in developing countries by increasing their capacity

- Provide **regular briefing reports** of the AF Board meeting and **quarterly publish newsletter** about project areas
- Engage in **regular CSO dialogue** with the AF Board
- **Baseline mapping of awareness** and involvement of different stakeholders

- More than **45 subscribed members** and 8 partners: Senegal, Benin, South Africa, Jamaica, Kenya, Cambodia, Tanzania, Honduras
What is the institutional framework for the project?

- Institutional, technical approaches and administrative processes are taking place for the first time
- The learning curve is different for each institution. Some institutions move ahead sooner depending on its own understanding and flexibility.
South Africa case study

In the process of identifying and conceptualising a direct access proposal
NIE: South African National Biodiversity Institute (SANBI)

✓ Process led by an Interim Steering Committee, Steering Committee to be finalised

✓ Consultative Process
✓ Consulting with civil society, academia, government departments on all levels and business
✓ Project development under way
Key principles (South Africa)

- The NIE process must be **transparent, accessible and accountable**
- **Partnerships** should be promoted – at all stages of the project
- Investments should be **coordinated** and **programmatic**
- **Communities** should be supported to access funds directly
- Projects should link with national and sub-national *enabling frameworks*
- The process should lay a **foundation** for future investments *Key outcomes*

- Projects must aim to deliver concrete and tangible results
- Learning networks and communities of practice
